

# TOPALIT® FACTSHEET FOR *Designers*

## Classicline | Smartline

Possible file formats: .psd, .tif, .eps, .ai, .pdf, .jpg

Used tools: Adobe Creative Cloud and older.

Pictures must be CMYK.

Resolution must be 300dpi.  
Beyond is not necessary.

Designs must be finished and in real size.

All used fonts must be vectorized.

Signal colours and metallic colours are not possible  
due to the fact that we are printing in CMYK  
method.

Color must in Pantone U solid uncoated -  
alternatively be specified in RAL.

With no precise color must be provided a uncoated  
proof.

In the case of color adjustments in digital or  
offset printing of color-defibrated reflective originals  
(Digiproof, Pantone/RAL, pre-resinated standard  
dekors, ...), color deviations and slight impairment  
of the printed image can not be ruled out since it is  
not possible in terms of production engineering to  
achieve a 100% identical result.

We are printing on uncoated papers. Keep this in  
mind when you do the colour design.

### Red Line: File size

File size: Square tabletops must have plus 9cm  
added to the table size, round table tops plus 6cm  
added to the table size. For example: A table  
80cmx80cm needs a size of 89cmx89cm, a table  
80cm needs a size of 86cm. The bigger size is used  
for the table nose.

### Blue Line: Table size

**Green line:** If you want a border, or a logo as big as  
possible on the surface, subtract minimum (!!!) 8cm  
from the table size (4cm on each side) to keep  
problems during the manufacturing away.  
For example: A Maximum size on an 80cm x 80cm  
is 72cm x 72cm. For designs, that cover the whole  
table, this line is irrelevant.

Coloured lines must not be in the finished design,  
these are just to help you with the design.
